

Ant Control

In their natural habitat, ants are actually very useful. Breaking down organic matter, aerating the soil, helping to make sure other insect populations don't get out of control, these are just some of the things that ants can do. However, they do not recognise a human habitat when they see one, and they don't care.

It's easy to get rid of individual ants as you see them, but they will keep coming back if you don't destroy the source.

Angus Hygiene and Pest Control will get rid of the infestation with chemicals that are specially formulated for the job and take steps to make sure they do not come back.
